

Integrated Health System's AI-Powered Med Econ Transformation

Background

An Integrated Health System customer, leveraging the Bridge platform's Med Econ capabilities, has launched a real-time, AI-powered dashboard to empower stakeholders with actionable medical economics metrics, patient-level insights, and financial performance indicators. The initiative supports medical directors, financial analysts, care coordinators, and QA teams in making data-driven decisions and optimizing operational oversight.

Situation

Prior to implementing Med Econ, this customer encountered several obstacles. They had fragmented data sources, which limited visibility into key performance indicators (KPIs), patient-level data insights, and financial reconciliation. Additionally, the lack of dynamic filtering and drill-down capabilities in their previous state analytics made it difficult to analyze trends by organization, payer, line of business, or contract. Lastly, they were in need of secure, HIPAA-compliant data handling and audit logging to ensure regulatory adherence as risk-bearing contracts grew.

Solution

The Bridge platform empowered the customer with a unified data view by aggregating claims, eligibility, membership, and patient registry information for comprehensive analysis. Bridge introduced interactive KPI panels featuring dynamic filtering across organization, payer, line of business, and contract dimensions. Financial summaries and reports, including profit and loss reports, specialist comparisons, high-cost patient identification, and childcare services analytics, provided deeper operational insights. Additionally, the platform generates contextual, model-driven narratives that highlight expenditure patterns, risk score trends, and projected savings.

"The Med Econ Dashboard has given our teams the clarity and flexibility needed to manage medical economics efficiently, at scale. The dynamic filters, interactive widgets, AI-powered insights, and secure data handling are game changers for our organization."

- Director, Financial Planning & Analytics
